

Data and Validation Pipeline

Non-sealed construction and gates precede one-way sealed final evaluation

Data construction

Public read-only
traces
or preregistered
synthetic-safe data

E1

Normalize and scrub
remove hidden gold
candidate markers

E2

Repo-disjoint split
train validation
holdout

E3

Data health audit
hashes leakage graded
difficulty

E4

Non-sealed train
fixed config and seeds

E5

Postflight gates
source-overlap native
controls

E6

Package only after
gates
no sealed tuning

E7

Sealed final eval
one-way evidence only

Audit and split
gates

Training and
postflight

Package and final
evaluation

Sealed boundary

Connection labels
E1: raw traces
E2: clean rows
E3: effective hashes
E4: only if passed
E5: measured metrics
E6: if deltas pass
E7: final evaluation only
